

Circular columns in spruce and larch

HNT-circular columns are characterized by high dimensional stability and almost 100% crack-free surface in comparison to conventionally produced columns made of laminated wood or solid timber.

A lifting of the annual rings are prevented by the cross-bonding of this noble building material. Specially pre-selected raw materials of wood species of spruce, pine and larch guarantee a perfect, homogeneous and refined appearance.

charakteristics of circular columns

- production according to ÖNORM EN 386
- kind of wood: spruce, pine and larch
- crossed lamination with MUF-adhesive
- weather-resistant, transparent glue line
- length up to 8 m
- diameter (DM) from 80 mm up to 700 mm
- surface: DM < 120 mm planed, DM > 140 mm sanded
- quality: healthy knots, no black rounded knots
- individually or in packages wrapped in foil
- variants are possible on request
